IN THE SPECIFICATION

Please amend the paragraph beginning on page 13, line 10 as follows:

As a further example, a web site ~~www.maps.com~~ may offer interactive maps to a user. The user may visit that particular web site expecting to obtain a map, to zoom and scroll the map in order to display a particular geographic coordinates, and to print a set of driving directions. If the zoom, scroll and print functionality is provided using JavaScript, but the client has JavaScript disabled, then the user is unlikely to visit that particular web site more than once, because the web site's functional content is not available without a JavaScript-enabled client.

Please amend the paragraph beginning on page 13, line 18 as follows:

Similarly, a book seller's web site ~~www.buybooks.com~~ may offer searching as the only way one may locate a particular book that the user wants to buy. In order to access the search function provided, the web site presents a form, and the user enters the book name on the search form. However, forms support is another browser functional characteristic that may be selectively disabled by the user, perhaps because a concern for the potential security exposure of accidentally sending private information to an untrusted web site. Therefore, if the only way to find a desired book on ~~www.buybooks.com~~ the web site is to submit a form, but the user has forms disabled, then that user would be unlikely to visit ~~www.buybooks.com~~ the web site again since there is no way for the user to buy a particular book without exercising the disabled search function. A web content provider wishing to add content to that particular web site could therefore include forms as part of their content, and be confident that users of that site would not be barred from interacting with the forms because of their choice of browser settings.

Please amend the paragraph beginning on page 14, line 26 as follows:

```
<!--
var plugin = (navigator.mimeTypes &&
    navigator.mimeTypes["application/x-shockwave-flash"]) ?
    navigator.mimeTypes["application/x-shockwave-
    flash"].enabledPlugin : 0;
if ( plugin &&
parseInt(plugin.description.substring(plugin.description.in
dexOf(".")-1)) >= 4 ) {
    // Check for Flash version 4 or greater in Netscape
    document.write('<EMBED src="t1.swf" quality=best
    bgcolor=#6633CC ');
```
